PROFESSIONAL SUMMARY

Software Developer with **3 years** of experience building production ready AI powered platforms and scalable SaaS applications using Python, LangGraph, and React.js. Deep expertise in Retrieval Augmented Generation (RAG), NL2SQL pipelines, and LLM integration with OpenAI. Experienced in designing secure authentication and authorization systems (IAM/RBAC) and high throughput API development with FastAPI and RESTAPI. Experienced in delivering end to end Generative AI features, semantic search systems, and metering platforms in Agile environments.

EXPERIENCE

Software Developer

Factly Media and Research

May 2024 – Present

Hyderabad, India

- Built **GoPie**, a full stack multi dataset SQL agent platform using **React.js**, **FastAPI** featuring a natural language to SQL (**NL2SQL**) engine with semantic schema search via Qdrant, and support for DuckDB and ClickHouse OLAP backends.
- Built a **LangGraph / LangChain** based workflow engine that orchestrates multi step chat reasoning, tool execution, semantic search, and SQL generation.
- Established **CI/CD** pipelines for GenAI models using **ArgoCD** and **GitOps**.
- Integrated semantic search with **Qdrant** vector embeddings for dataset schema retrieval, enabling contextual AI responses and accurate schema aware query generation.
- Integrated **Zitadel** and **Better Auth** across enterprise applications, developing complete **authentication/authorization** flows with custom UI screens for login, registration, **MFA**, password recovery, and role based access, reducing user onboarding friction by **50%** through intuitive UI flows, supporting seamless migration of **5,000+** users with **zero downtime** or security incidents.
- Implemented multi tenancy support with organization/user context propagation throughout agent workflows, enabling secure isolation and audit trails for enterprise deployments.
- Migrated the application's front end codebase from **React JavaScript** to **React TypeScript**, reducing runtime errors by 40%, improving code maintainability and developer onboarding time by 30%, enhancing overall code quality and long-term scalability of the codebase.

Software Developer

Tata Consultancy Services

March 2023 – May 2024

Hyderabad, India

- Led development of metered AI usage billing for an enterprise SaaS platform by tracking **PostgreSQL** query execution metrics, syncing usage events to **Polar.sh** via a **Python Typer CLI** worker deployed as a **Kubernetes CronJob**, enabling accurate per organization LLM and OLAP consumption billing.
- Designed **AI chatbot UI in Figma** and implemented it in **React.js**, transforming complex conversational flows into a user friendly interface.
- Implemented **600+ end to end test cases in Playwright**, standardizing testing and significantly reducing production defects.

TECHNICAL SKILLS

Languages: Python, Java, JavaScript, TypeScript, SQL

Frameworks and other tools: Fast API, Agentic AI, RAG, LLM Integrations, LangGraph, LangChain, Portkey, React.js, Next.js, Redux, Tailwind CSS, Spring Boot, REST API, AWS, GitOps, Argo CD, Docker, Kubernetes, PostgreSQL, DuckDB, MySQL, Git, Playwright, Postman.

Core Competencies: DSA, System Design, Problem Solving, Design Patterns, Security.

EDUCATION

VNR VJIET

B.Tech, Computer Science and Engineering, GPA 8.6/10

Hyderabad, Telangana

Aug. 2019 – March 2023

CERTIFICATIONS

- Oracle Cloud Infrastructure 2025 Certified Generative AI Professional.**
- Certified in Agile Software Development: Clean Code Practices.
- Nationality Identification using Handwriting**, IOSR Journal of Computer Engineering, 2023.
